# Krups coffee maker clean cycle instructions manual download online download

Check for any tiny stones mixed up with the beans which may also damage the machine. Your machine has a unique design using hydraulic technology to make perfect coffees. This construction allows the coffee circuit to be rinsed under pressure and automatically drained after each cup: the guarantee of perfect hygiene. This unique system ensures that there is no water residue inside the machine, limiting scaling and ensuring long-lasting performance. In the case of repeated uses, a few drops may issue from the steam nozzle. This can be due to a number of factors:

- There is no water in the tank; fill the tank.
- Your tank is not correctly installed; press firmly on the tank.
- The filter is blocked; the ground coffee is too fine. Your appliance contains valuable materials which can be recovered or recycled. Why isn't the Auto-Cappuccino accessory taking in milk? What should I do? The sign of a true Espresso is the froth which is created by pressure within the machine whilst the coffee is being made. Can I use ground coffee in a whole bean coffee machine or coffee beans in a ground coffee machine? This can be determined using the stick provided with the device or by contacting your water provider. To optimise the taste and increase the life of your machine, we recommend using the Claris-Aqua Filter System cartridge. Why is the coffee fineness knob for the grinder difficult to turn? To preserve its aroma and for hygienic reasons, we recommend that you wipe it with a clean, soft, dry cloth each time it needs to be filled. Important: Do not use water to clean the bean container, the presence of water in the container could damage your machine. Why should I descale? Why is the water tank light still on? Can I run a descaling manually? It is advisable to adjust the appliance according to the hardness of the water used. Why is the coffee dispensed so slowly? (accessory sold separately) Make sure that the tube inserted into the milk is not clogged. Ensure that the flexible tube is inserted properly into the accessory to avoid air intake. After turning off your appliance and allowing it to cool, unlock the outlet of the Auto-Cappuccino accessory. We remind you that this accessory must be cleaned after each preparation. After a certain number of coffees, it is important to clean and degrease the entire coffee circuit of the machine with a cleaning tablet to preserve the taste quality of your drinks. The machine is equipped with a cleaning programme and automatically alerts you when it is necessary, depending on several parameters: your consumption, the water hardness setting, etc. We recommend that you clean the machine as soon as it displays the alert and that you use the tablets whose dosage has been perfectly adapted and tested by our teams to act effectively, without any risk of aggression or damage to the machine's internal components. Clean the filter holder and try a less finely ground coffee.
- The pump is unprimed; refer to the instructions on how to prime it.
- Your appliance has scaled up; descale it.
- The Claris filter cartridge has been changed but not primed; refer to the instructions on how to prime it. Your espresso machine is equipped with a counter and will automatically alert you when descaling is necessary after a certain number of steam/hot water brews and according to several parameters: your consumption, the water hardness setting, etc. It is therefore normal not to receive alerts if your steam/hot water consumption is low. It is not necessary to descale apart from the machine alerts. You can also contact your town hall to get this information. In this case, empty the coffee bean container and vacuum out the interior near the grinder. We recommend using good quality coffee beans to preserve the life of the integrated grinding wheels of the coffee grinder. If your machine still makes an abnormal noise, we invite you to contact our customer service. It may be normal not to have any warning messages if your steam/hot water consumption is low. Your espresso machine is equipped with a counter and automatically alerts you when descaling is necessary after a certain number of steam/hot water brews and according to several parameters: your consumption, the water hardness setting... The appliance will automatically restart when the power returns and will be ready for a new cycle. What is the shelf life of coffee beans? Why isn't steam coming out of the nozzle? Experiment with the different varieties, blends and degrees of roasting to find what suits your taste best. If it still does not work, do not try to dismantle or repair the appliance yourself, instead, take it to an approved repair centre. What should I do if the power cord of my appliance is damaged? How to make a cappuccino? What is the best way to descale my machine? How to set the grinding fineness? Arabica beans give the best flavour and are naturally low in caffeine. What makes an authentic Espresso Coffee? For hygienic purposes, we recommend that you remove the drip tray to clean it daily and let it air dry before putting it back in the machine. When the floats are in the upper position, this indicates an overflow. Light roasting brings out the full complement of aromas and results in a coffee that is both mild and full of flavour – that of the true connoisseur! Great coffees should only ever be lightly roasted to bring out their true richness, subtlety and complexity. Make sure that the drip-tray has not overflowed and empty if necessary. Verify that the drip-tray is correctly positioned. Generally speaking, the darker the roast, the stronger the coffee flavour. Check that the coffee bean container has coffee in it and that it is dispensing correctly. Avoid using oily, caramelised or flavoured coffee. Make the drink in two cycles by using the 2 cups function. Adjust the fineness of ground coffee by turning the adjustment knob located in the coffee bean container. According to model: Why isn't the espresso or coffee hot enough? Why isn't the water or steam being dispensed normally from the steam nozzle? Image not available forColor: To view this video download Flash Player Yes, fully-automatic espresso machines are factory calibrated for a water hardness level of 3, but they can be recalibrated depending on the type of water in your area. To determine the hardness of your water, (0 = very soft, 1 = soft, 2 = slightly hard, 3 = hard, 4 = very hard) dip one of the paper test strips provided with your device into your water for one second, then wait 1 minute for the result or contact your water provider. Leave it at a local civic waste collection point. You do not have to run the cleaning programme immediately when the machine alerts you to do so, but you must do it within a short time. If cleaning is postponed, the warning message will remain on the display until the operation is performed. Remove the water filter if your machine uses one. An espresso has a stronger aroma than a "normal" coffee. In fact, an espresso can be distinguished by its rich aroma and the creamy foam on the surface of the cup. This requires a pressure of 15 bar (achieved only by espresso machines), water heated to 90-92°C and finely ground and measured coffee (7 g per cup). How does an espresso compare to filtered coffee? Please go to the "Accessories" section of the website to easily find whatever you need for your product. What water should I use to fill the water tank and prepare my beverage? It is important to always leave it in place and to empty it regularly. The best way to prolong the life of the beans is to put them straight into an airtight container and store them in the fridge. Why is the coffee grinder making a strange noise? Remove the Claris cartridge. Which parts of the espresso machine should be cleaned? This cartridge should be screwed onto the bottom of the tank and the settings selected. Plug in the appliance but do not turn it on. Open the service hatch. Calibrate the appliance depending on the water hardness. Adjust the coffee temperature. Adjust the automatic power supply cut-off mechanism. Close the service hatch. Remove, fill and replace the water tank. Put coffee into the container provided for this purpose. As the devices are tested in factory, it is possible to have coffee residue in the device during the first use. Run a brew cycle with water only to rinse. Adjust the coffee grinding fineness. Is this normal? Only change the grinder setting when it is running. Follow the instructions in the user manual for descaling your machine. We recommend that you descale as soon as the machine displays the alert and that you use the descaling product whose dosage has been perfectly adapted and tested by our teams to act effectively against limescale and scale, without any risk of aggression or damage to the machine's internal components. It is not necessary to descale apart from warning messages. Where can I dispose of my appliance at the end of its life span? It is then necessary to empty the drip tray. Coffee grounds collector. The coffee grounds collector receives the extracted coffee grounds. For hygienic reasons, we recommend that you clean the coffee grounds collector under hot soapy water every day and let it air dry before putting it back in the machine. When it is necessary to empty the coffee grounds collector, the machine will indicate this. You can empty it more regularly, but when the machine is switched on, put the collector back in so that the machine can record that it has been emptied. Important:
- Not emptying the coffee grounds collector regularly as described above can damage your machine.
- Do not put the collector in the dishwasher. Water tank To preserve the aroma of your coffee and for hygienic reasons, we recommend that you use fresh water, clean the tank daily with hot water and a sponge, and let it air dry before putting it back on the machine. Coffee bean container Coffee beans can leave a greasy residue on the sides of the container, which can affect the quality of your coffee. Do not use your appliance. What if there is water or coffee under the appliance? Why isn't the coffee very creamy? Most of the noise produced by the machine comes from the mill. What should I do if my appliance is not working? I've just opened my new device and I think there is a part missing. Drip tray The drip tray is used to catch any water or coffee that spills out of the machine during and after brewing. Bottled water is also OK. Do not use refrigerated or warm water as this might impact the temperature of the beverage. Use always fresh water and replace the water if system has not been used for more than 2 days. For cold beverages, use water at ambient temperature, never refrigerated water, and place two or more ice cubes (20g per ice cube) in the cup. To be noticed that water hardness is the first reason of machine calcification and so it is recommended to descale the machine frequently (every 3 months or less according to water hardness). No, these appliances are specifically designed depending on the type of coffee used. If you use the wrong coffee, remove it and refill with the correct type. Check the proper positioning of the tank on the device. Make sure the magnetic float of the water tank moves freely. Rinse the tank and descale if necessary. Turn the grinding fineness button to the left to obtain more finely ground coffee. To avoid any danger, have it replaced by an approved repair centre. Why is the coffee is too lightly coloured or too weak? What are the guarantee conditions of my appliance? If you believe that one part is missing, please call Consumer Services Center and we will help you find a suitable solution. Maintenance and cleaning When should the Claris Aqua Filter be replaced? Check the temperature setting of the selected coffee and change it if necessary. Heat the cups by rinsing them in hot water to avoid creating "thermal shock" with cold cups. The coffee quality obtained will be even better. We recommend that you only descale your machine when it warns you to do so, to avoid damaging components that have not been scaled. During the first few months of use, if the number of beverages made is not sufficient for descaling to be necessary, you will not be able to descale manually in advance (apart from the automatic alert). After this number of drinks, it is possible to descale manually (depending on the model). Turn the adjustment knob located in the coffee bean container. This setting should be applied during grinding and notch by notch (you can hear the noise of the grinder before the coffee starts to flow). According to model: What should I do before using the device for the first time? Where can I buy accessories, consumables or spare parts for my appliance? They should keep for at least 3 months in this way. Why are automatic cleaning programs sufficient to ensure perfect hygiene and the longevity of your machine? The pressure is measured in bars (from 1.5 to 19) so the higher the bar pressure the richer and thicker the froth. Tap water (normal household potable water) is perfectly OK as long as it is free of odors that might alter the taste of the beverage. How to make an espresso? Scale deposits naturally form in your appliance and, without intervention, can affect the performance of the machine. Regular descaling of your machine will preserve the proper functioning of your machine and ensure its longevity by eliminating all deposits of limescale or scale in all circuits that are in regular contact with water and susceptible to scaling. All of our machines are equipped with an alert feature that lets you know when to descale. A bit of noise is therefore normal when the coffee is grinding. Sometimes a foreign body finds its way into the grinder. After each use, you can see that there is residual water in the drip tray, which is linked to this automatic rinsing/drainage. Reduces the need for cleaning and maintenance to a minimum, giving you the pleasure of coffee without the hassle. Various topics What are the best type of coffee beans to buy? If this does not solve your problem, turn the fineness of grind button to the right to obtain a coarser grind (may depend on the type of coffee used). Run one or several rinsing cycles. What should I do if a power outage occurs during a cycle? The Claris cartridge must be replaced approximately every 50 litres of water or at least every 2 months. Depending on your model, the machine may automatically prompt you to replace it. How do I clean the inside of my espresso machine? I've been using my machine for a long time and I still haven't had a descaling alert. Make sure the steam nozzle is not blocked. After turning off your appliance and letting it cool: clean and unclog all the orifices of the nozzle with needle provided. Unclog the orifice of the steam nozzle support pipe with a needle. Remove the Claris cartridge. Avoid very dark roasted beans as these tend to be more oily and can clog the machines. Find more detailed information in the Guarantee section of this website. After following the instructions in the user manual for starting the appliance, make sure that your electrical socket is working by plugging another appliance. When the machine displays a cleaning alert, do I have to do it immediately? Technical support The water does not run through. When should I descale my machine?
